

LIFE EGGSHELLENCE, coordinated by ITC-AICE, finalist in the Top Insider 22 Awards

(REF.: LIFE19 ENV/ES/000121)

Castellón, 27/10/2022.- This past 25th of October in Madrid, Dr. Francisca Quereda, together with the researcher Nuria González, members of the research team of the LIFE EGGSHELLENCE project, went to Madrid to receive the award as finalists of the Top Insider Awards 2022 in one of the 10 categories contemplated in these awards, specifically, in the Smart Business Intelligence category specifically for the LIFE EGGSHELLENCE project funded by the LIFE 2014-2020 Environment and Climate Action Programme of the European Union (Ref. LIFE19 ENV/ES/000121).

LIFE EGGSHELLENCE reuses eggshell waste to obtain calcium biocarbonate, which can be used to make wall tiles. This alliance between egg production and ceramics companies to recover waste and create new products, involving companies, universities and research centres in Spain and Portugal, caught the attention of Business Insider, a US-based organisation that supports the talent and values of innovative companies and has a global dimension.

In fact, at Business Insider Spain, as they say, they want to give greater prominence to a new generation of leaders who are changing the world and offering information, learning and also entertainment to the audience. People and companies that are leaders in sustainability, inclusion, equality, diversity, commitment to people and positive impact on society.

This project is financed by the LIFE Programme 2014-2020 of the European Union for the Environment and Climate Action under the project number LIFE19 ENV/ES/000121.
Este proyecto está financiado por el Programa LIFE 2014-2020 de Medio Ambiente y Acción por el Clima de la Unión Europea con referencia LIFE19 ENV/ES/000121.

"We congratulate the winning company in our category, RatedPower, and I must say that we have been very happy to participate in a great ceremony and to have become finalists in awards where the nominations included companies that are, many of them, at the top of national and international leadership," said Dr. Francisca Quereda, head of research at the Institute of Ceramic Technology (ITC-AICE), the coordinating body of LIFE EGG SHELL ENCE.

The entire research team closely followed the ceremony and both Francisca Quereda and Nuria González expressed their excitement at having been able to personally meet great business leaders of this magnitude and to bring home the award as finalists, which is an important incentive for them to continue their research with greater motivation.
